## 1 Assessment

The following equipment as further described in section 3 of this test report was evaluated against the applicable criteria specified in FCC CFR47 Parts 22 and 24.

No deviations were ascertained during the course of the tests performed.

Company	Description	Model
SentriLock, LLC	Cellular-enabled Wireless Smartcard Reader	Remote Access Device 3G

### Report reviewed by:

Nov 30, 2016	Compliance	Kris Lazarov (EMC Engineer)

### 2.3 Identification of the Manufacturer

<b>Manufacturer's Name:</b>	Same as Client
<b>Manufacturers Address:</b>	
<b>City/Zip Code</b>	
<b>Country</b>	

### 3 Equipment under Test (EUT)

#### 3.1 Specification of the Equipment under Test

<b>Marketing Name / Description:</b>	Cellular-enabled Wireless Smartcard Reader
<b>Model Number:</b>	Remote Access Device 3G
<b>FCC-ID :</b>	W9T-P10305
<b>Product Description:</b>	Cellular-enabled Wireless Smartcard Reader
<b>Technology / Type(s) of Modulation:</b>	GSM/(E)GPRS 850/1900 WCDMA FDD II/V
<b>Integrated Module Info:</b>	Cinterion EHS5-US (FCC ID: QIPEHS5-US/ IC ID: 7830A-EHS5US) GSM/GPRS/EDGE/UMTS/HSPA Module
<b>Operating Frequency Ranges (MHz)</b>	GSM 850: 824-849 MHz GSM 1900: 1850-1910 MHz WCDMA FDD II: 824-849 MHz WCDMA FDD V: 1850-1910 MHz
<b>Antenna info:</b>	Internal antenna. Antenova Reflexus Documented Maximum Antenna Gain obtained from Antenna Manufacturer datasheet: 2.0 dBi @ 850 MHz, 3.7 dBi @ 1900 MHz
<b>Max. Output Powers:</b>	Manufacturer Declared Maximum RMS powers at antenna port. Based on the operational description and Tune Up procedure. GPRS850 = 35 dBm ERP (3.16 Watts) GPRS1900 = 33.7 dBm EIRP (2.34 Watts) FDD V = 26.5 dBm (0.45 Watts) FDD II = 28.2 dBm (0.66 Watts)
<b>Rated Operating Voltage Range:</b>	3.0 V (Low) / 3.7 V (Nom) / 4.2 V (High)
<b>Rated Operating Temperature Range:</b>	-40°C to 85°C
<b>Test Sample Status:</b>	Production

### 3.2 Identification of the Equipment under Test (EUT)

EUT #	Identification (IMEI #)	HW Version	SW Version	Notes/Comments
1	357330051688653	.0	02.03.00	Radiated Sample
2	357330051688315	.0	02.03.00	Conducted Sample

### 3.3 Identification of Accessory equipment

AE #	Type	Model	Manufacturer	Serial Number	Notes
1	5V USB Power Adapter	SKB0501000PU	-	-	Used to charge internal battery when needed

### 3.4 Dates of Testing:

June 19, 2016 – Aug, 5 2016

---

#### **4 Subject of Investigation**

The objective of the measurements done by CETECOM Inc. was to evaluate the compliance of the EUT against the relevant requirements specified in the Code of Federal Regulations Title 47 parts 22, 24 while leveraging the modular grant FCC ID: QIPEHS5-US.

## 5 Measurements

### 5.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus, with 95% confidence interval (in dB delta to result), based on a coverage factor k=1.

#### Radiated measurement

9 kHz to 30MHz	±2.5 dB (Magnetic Loop Antenna)
30 MHz to 1000 MHz	±2.0 dB (Biconilog Antenna)
1 GHz to 40 GHz	±2.3 dB (Horn Antenna)

#### Conducted measurement

150 kHz to 30 MHz	±0.7 dB (LISN)
-------------------	----------------

RF conducted measurement	±0.5 dB
--------------------------	---------

### 5.2 Environmental Conditions during Testing:

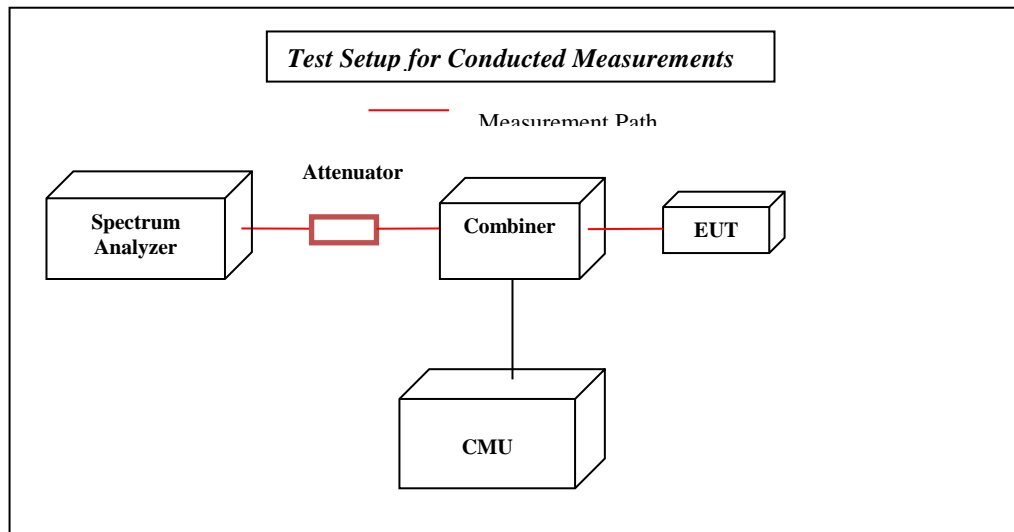

The following environmental conditions were maintained during the course of testing:

- Ambient Temperature: 20-25°C
- Relative humidity: 40-60%

### 5.3 Conducted measurements

Testing is performed according to the guidelines provided in FCC publication (KDB) 971168 D01 v02r02 – “Measurement Guidance for Certification of Licensed Digital Transmitters” and according to relevant parts of TIA-603C 2004 as detailed below.

---

#### 5.4 Radiated Measurement

- The exploratory measurement is accomplished by running a matrix of 16 sweeps over the required frequency range with R&S Test-SW EMC32 for 4 positions of the turntable, two orthogonal positions of the EUT and both antenna polarizations. This procedure exceeds the requirement of the above standards to cover the 3 orthogonal axis of the EUT. A max peak detector is utilized during the exploratory measurement. The Test-SW creates an overall maximum trace for all 12 sweeps and saves the settings for each point of this trace. The maximum trace is part of the test report.
- The 10 highest emissions are selected with an automatic algorithm of EMC32 searching for peaks in the noise floor and ensuring that broadband signals are not selected multiple times.
- The maxima are then put through the final measurement and again maximized in a 90deg range of the turntable, fine search in frequency domain and height scan between 1m and 4m.
- The above procedure is repeated for all possible ways of power supply to EUT and for all supported modulations.
- In case there are no emissions above noise floor level only the maximum trace is reported as described above.
- The results are split up into up to 4 frequency ranges due to antenna bandwidth restrictions. A magnetic loop is used from 9 kHz to 30 MHz, a Biconilog antenna is used from 30 MHz to 1 GHz, and two different horn antennas are used to cover frequencies up to 40 GHz.

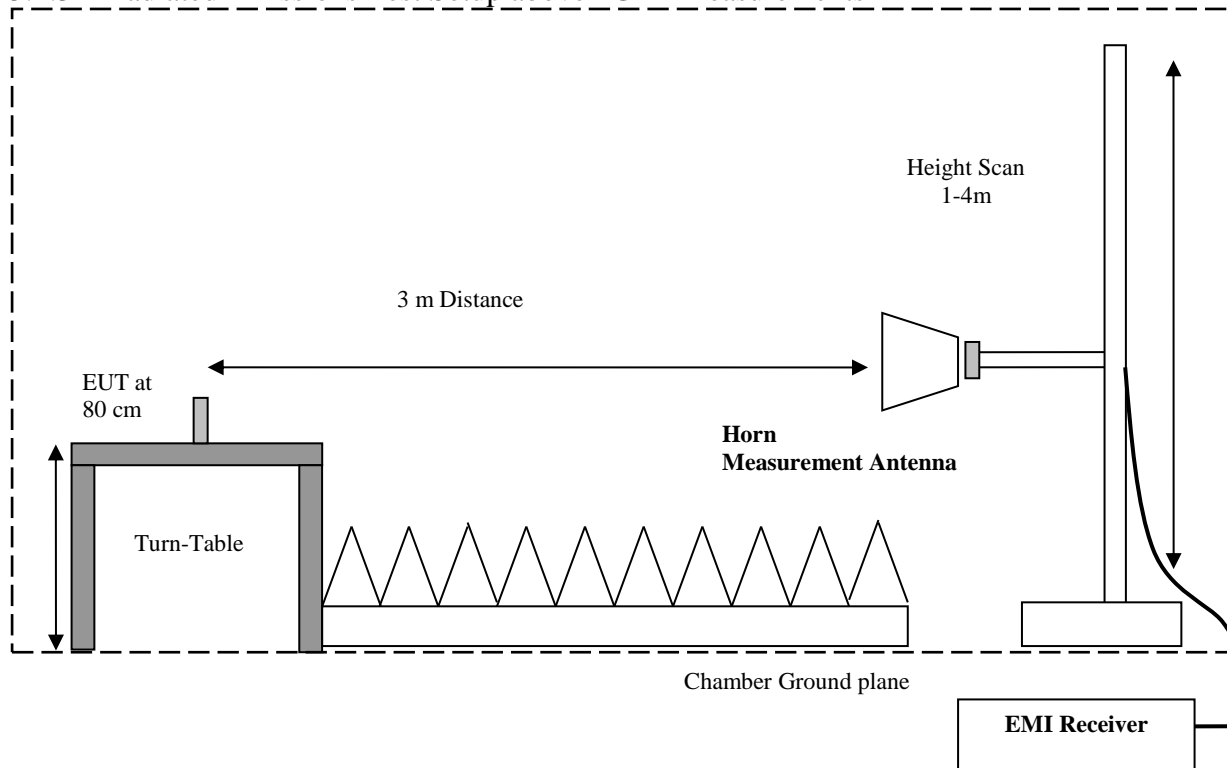

#### 5.4.1 Radiated Emissions Test Setup below 30MHz Measurements

#### 5.4.2 Radiated Emissions Test Setup 30MHz-1GHz Measurements

#### 5.4.3 Radiated Emissions Test Setup above 1GHz Measurements

## 5.5 Sample Calculations for Field Strength Measurements

Field Strength is calculated from the Spectrum Analyzer/ Receiver readings, taking into account the following parameters:

- Measured reading in dBμV
- Cable Loss between the receiving antenna and SA in dB and
- Antenna Factor in dB/m

All radiated measurement plots in this report are taken from a test SW that calculates the Field Strength based on the following equation:

$$\text{FS (dB}\mu\text{V/m)} = \text{Measured Value on SA (dB}\mu\text{V)} - \text{Cable Loss (dB)} + \text{Antenna Factor (dB/m)}$$

Example:

Frequency (MHz)	Measured SA (dBμV)	Cable Loss (dB)	Antenna Factor Correction (dB)	Field Strength Result (dBμV/m)
1000	80.5	3.5	14	98.0

## 6.3 Dates of Testing:

June 19, 2016 – Aug, 5 2016

## **7 RF Power Output Verification (Conducted)**

### **7.1 Reference:**

FCC: CFR Part 2.1046, CFR Part 22.913, CFR Part 24.232

### **7.2 Limits:**

#### **FCC Part 22.913 (a)**

(a) The effective radiated power (ERP) of mobile transmitters must not exceed 7 Watts (38.45dBm).

#### **FCC Part 24.232 (c),(d),(e)**

(c) Mobile and portable stations are limited to 2 watts EIRP and the equipment must employ a means for limiting power to the minimum necessary for successful communications.

(d) Power measurements for transmissions by stations authorized under this section may be made either in accordance with a Commission-approved average power technique or in compliance with paragraph (e) of this section. In both instances, equipment employed must be authorized in accordance with the provisions of §24.51. In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

(e) Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage. The measurement results shall be properly adjusted for any instrument limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, etc., so as to obtain a true peak measurement for the emission in question over the full bandwidth of the channel.

### 7.3 Measurement Data:

### 8.2 Limits:

FCC Part 22.917 (a) and Part 24.238 (a),

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB = (-13dBm)

### 8.3 Test conditions and setup:

Ambient Temperature (C)	EUT Set-Up #	EUT Operating Mode	Power Input
22.3	1	GPRS class 12	03 on 850MHz, 05 on 1900MHz
22.3	2	UMTS RMC 12.2k	All 1

### 8.4 Test plan

GPRS: maximum power measured on class 8 GPRS according to report on file for FCC-ID.

UMTS: maximum power measured on RMC12.2k according to report on file for FCC-ID.

Frequencies below 30MHz and frequencies above 18GHz have only been investigated for mid channel. For the frequency range between 1GHz and 18GHz low mid and high channel have been investigated.
